Start Dvorak. Build the habit.

Your first 10 minutes, the keys to remember, and a plan for what comes next.

01 Find your starting position

STANDARD US DVORAK

Rest left fingers on A O E U and right fingers on H T N S. Index fingers rest on U / H at the physical F / J bumps, and reach inward for I / D. Thumbs share the space bar.

02 Try this 10-minute session

For these drills: select Dvorak in your computer's input settings, then open a blank note.
Keep QWERTY in the layout switcher. These drills use only home-row letters and spaces.

2 MIN **Find the keys. Return to U and H after each group.**

```
aoeu  htns  ui iu  hd dh
```

6 MIN **Repeat these words slowly. Look only when you need to.**

```
the then this that   hand said sound south
```

2 MIN **Join the words. Repeat each line at a steady pace.**

```
the sun is out   send this note   that is the idea
```

WHEN TO ADD MORE KEYS

Once you can do two slow, clean passes without checking the chart, add 2-3 off-row keys in a gradual tutor. If you keep hesitating, repeat this session next time.

HOW TO START USING IT

Keep QWERTY for deadlines. Try Dvorak in a short daily note first; check punctuation, copy, paste and undo before moving more work over. Accuracy comes before speed.

Keep practicing keyboardlayout.app/dvorak

The browser simulator works with your usual system layout. It changes practice only; use a blank note with system Dvorak enabled for the drills above.
